

Essays on Productivity Beliefs

3-minute presentation: PhD Thesis Overview

Reha Tuncer - University of Luxembourg

13 March 2025

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?
- Platform where participants can earn money by completing tasks or watch videos

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?
- Platform where participants can earn money by completing tasks or watch videos
- Allocate time between tasks and videos, next day execute the plan

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?
- Platform where participants can earn money by completing tasks or watch videos
- Allocate time between tasks and videos, next day execute the plan
- Randomly assign participants to different video conditions where one is made for watching more, and remind them their plan

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?
- Platform where participants can earn money by completing tasks or watch videos
- Allocate time between tasks and videos, next day execute the plan
- Randomly assign participants to different video conditions where one is made for watching more, and remind them their plan
- Participants stick to their plan and remain unaffected by the video conditions

Part 1: Productivity of the Self

- Firms monetize user attention, which may hamper individual productivity
- Can the design of a fun activity affect the productivity goals of individuals?
- Platform where participants can earn money by completing tasks or watch videos
- Allocate time between tasks and videos, next day execute the plan
- Randomly assign participants to different video conditions where one is made for watching more, and remind them their plan
- Participants stick to their plan and remain unaffected by the video conditions
- Subtle intervention in a controlled environment, importance of self-imposed objectives in maintaining productivity

- Subtle intervention in a controlled environment, importance of self-imposed objectives in maintaining productivity

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?
- Incentivize university students to guess most productive peers without access to performance data

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?
- Incentivize university students to guess most productive peers without access to performance data
- Evaluate peers across IQ, EQ, and SAT Math and Verbal areas and guess the top

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?
- Incentivize university students to guess most productive peers without access to performance data
- Evaluate peers across IQ, EQ, and SAT Math and Verbal areas and guess the top
- Peers identify highly productive others across exam results and IQ, but not EQ

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?
- Incentivize university students to guess most productive peers without access to performance data
- Evaluate peers across IQ, EQ, and SAT Math and Verbal areas and guess the top
- Peers identify highly productive others across exam results and IQ, but not EQ
- Social skills are harder to observe and require diverse evaluation methods

Part 2: Productivity of Others

- Beliefs about others' productivity matters when composing teams, evaluating coworkers, hiring employees
- How well do peers identify the productivity of their classmates across hard and soft skills?
- Incentivize university students to guess most productive peers without access to performance data
- Evaluate peers across IQ, EQ, and SAT Math and Verbal areas and guess the top
- Peers identify highly productive others across exam results and IQ, but not EQ
- Social skills are harder to observe and require diverse evaluation methods
